

Version 1.45 Available April 21, 2008

New Features

Manage Lease and Other Custom Documents

We've expanded our Action Letter system to support arbitrary rich text documents and to allow for client-specific documents. This can be used to autopopulate lease documents, to build database notification letters, or for other purposes.

Account Management Page Redesign

Managing accounts has never been easier with textareas replaced by select lists, tooltip help for commonly used account options, and wizards for list-type options.

New Site Customization Page

Want to customize the way your system functions? Our new site customization page avails you of 100's of customization parameters with tooltip help.

Automatic Rescreening Recommendations

Increase rescreening ordering volume by allowing your clients to set a rescreening recommendation interval. The system will show them on their homepage how many candidates' screenings have expired and provide links directly to the expired reports.

New product : add2crim10yr

This new builtin product works like add2crim7yr except using 10 years of address history and ordering 10 year county searches.

New Integrated Suppliers

Backgroundchecks.com county and statewide criminal searches are now integrated. Convergence Research and SJV and Associates are also introducing integrations.

Applicant Check

Our SchoolCheck platform has been expanded to include additional products for regular background checks and an interface to allow self-initiated applicant screening.

Supplier Cost Reporting

Supplier costs are now tracked by the system (as provided by you in the vendor management module) and are reported on the revenue analysis pages, including revenue graphs which now show both court fees and supplier fees along with total revenue.

Coming Soon

Supplier Invoices

An experimental supplier invoicing module will be available for review in 1.45 and will be supported in our next major release.

ERC DataPlus Resellable Applicant Tracking

In partnership with Accio Data, ERC DataPlus will be offering a white-label version of their popular applicant tracking systems for upsell by employment screening firms, including an integration to the Accio Data platform for background checks. Everyone has clients who need an ATS, are unhappy with their ATS, or whos supplier won't integrate with you for screening. Now you can sell them your own!

Down the Road

We've got big plans for the future! Our next release will include milestone design changes to the interface to substantially improve the end user experience through faster page loads. Several new products are in the works, and we continue to add new suppliers regularly.

What do You Want?

What features do you want that we don't offer today? Call us, email us, fax us -- tell us what you want and let us show you the Accio Data difference!

**See You at the NAPBS Conference
April 13-15!**
